As a science, Digital Simulation subject does have its own level of difficulty to understand, therefore creative teachers are needed to be able to convey learning messages to students using various alternative learning media. So, this research was carried out with the aim to find out the effect of using video learning in digital simulation subject on students' learning outcomes at SMKN 7 Bengkulu City. The subjects of this research were students at SMK Negeri 7 Bengkulu City. This research uses a quantitative experimental approach. The instruments used in this research were pre-test, post-test and learning outcomes questionnaire. To see the effect on improving students' learning outcomes, this research was analyzed statistically using SPSS T-Dependent test program. The results of the research are that there is an effect of using videos learning in digital simulation subject on students' learning outcomes at SMKN 7 Bengkulu City.

Key words: Learning Strategies, Learning Media, Learning Outcomes.

1) Students

2) Supervisors
