Stunting is a chronic growth disorder in children due to a lack of nutrients over time. Children who suffer from stunting generally have shorter bodies than other children their age. The examination process for stunting at Rimbo Kedui is still relatively difficult and slow. The patient's parents must go directly to a pediatrician or a special doctor who handles stunting. The lack of specialized doctors who handle stunting disease in Rimbo Kedui is also one of the causes of the delay in handling toddlers who experience stunting disease. Therefore, an expert system was created that can be accessed online to help patients or parents of children to consult independently about stunting disease.

Keywords: *Expert System, Certainty Factor, Stunting Disease*
