This research aims to produce learning media based on podcast materials focusing on healthy interpersonal relations in the Physical Education subject for Grade X students at Public High School 2 in Central Bengkulu. This study is a research and development study, utilizing the ADDIE development model. The steps of the ADDIE model development are as follows: (1) Analysis, (2) Design, (3) Development, (4) Implementation, (5) Evaluation. The research problem formulation is how to develop learning media based on podcast materials focusing on healthy interpersonal relations in the Physical Education subject for Grade X students at Public High School 2 in Central Bengkulu. Data collection methods include observation, interviews, documentation, and questionnaires. Quantitative data analysis is conducted using Likert scale assessment scores which are then calculated for the average score using the Mean formula. The validity of this learning media is assessed by content experts and media experts, as well as student responses. The media validity has an average score of 3.83 with a valid category, material validity with an average score of 3.9 also in the valid category, and student response with an average score of 4.21.

Keywords: Learning Media, Podcast
