This research is motivated by the learning process in delivering material that still uses observant text, which makes students feel bored and less responsive to the material presented. One solution that can increase students' interest in learning is using computer-based learning media. This study aims to determine teachers' strategies in increasing students' interest in learning using computer-based interactive learning media in class statistical calculations, this type of research is experimental. The population of this research was all class students at SMA Negeri 7 of South Bengkulu, totaling 19 students. From these results it is known that the sig (2-tailed) value is $0.001 < 0.05$, and comparing the calculated t value with the t table, the calculated t value is $13.238 > 2.101$, so it can be concluded that H_0 is rejected and H_a is accepted, which means there is an increase in students' interest in learning. class X SMA Negeri 7 of South Bengkulu with computer-based learning media in basic computer network subjects.

Keywords: Learning Strategy, Computer Learning Media, Learning Interest.
