Currently, the government's fertilizer assistance program has not been implemented optimally. This is because the distribution of fertilizer aid does not yet refer to existing criteria. Where the process of distributing fertilizer aid does not consider criteria in the distribution process. It is hoped that this application can be useful for related parties. Based on the research results, Decision Support System that has been created can assist decision makers in determining the quality of the recipient group. This is proven by the results of tests carried out using the black box testing method, so that it is found that the normalization and ranking calculations are correct and based on black box testing which includes process input and output tests with reference to the software design have been fulfilled with results according to design.

Keywords: Fertilizer Aid, WP Method.
