*This study aims to determine the application of the use of wordwall media on the learning outcomes of class XI TJKT students in Vocational subjects at SMK Negeri 6 of Bengkulu City. This research method is descriptive quantitative experiment. The design that will be used is Design One Group Pretest-Posttest. The subjects of this study were 20 class XI TJKT students of SMK Negeri 6 of Bengkulu City. The instrument used was 20 multiple choice questions, the instrument has been tested for validity and reliability. The analysis technique used was the normality test and hypothesis test. The results of the pretest and posttest with an average of 65.18 and 84.07 with a difference in learning outcomes of 18.89% which indicates an increase in student learning outcomes. The results of the study with the paired sample test showed that the asym sig value. (2-tailed) of  $0.000 < 0.05$  where  $t_{hitung}$  is greater than  $t_{tabel}$   $11.157 > 2.056$  therefore  $H_0$  is rejected and  $H_a$  is accepted which means that there is an effectiveness of the implementation of the wordwall application on student learning outcomes. It can be concluded that wordwall learning media has a significant effect on the learning outcomes of class XI TJKT students of SMK Negeri 6 of Bengkulu City.*
